We will not mail out feeder pig sale nomination forms in the future. Those who have sold pigs will continue to receive forms from the Virginia Department of Agriculture representative.

Forms will be available from this office for anyone who wishes to sell for the first time.

No vaccination will be required for pigs consigned to the April sale in Farmville.

The latest report shows Appomattox with 9000 cattle of all kinds. This is up from the 7800 reported a year earlier.

If you are growing alfalfa watch out for the weevil this spring. We anticipate an equal or greater damage this year than last.

Population counts of overwintering adults indicate a severe infestation for the Southern Piedmont.

Growers can't beat checking their fields on a regular basis.

Stop by and ask for Control Series 136, Control the Alfalfa Weevil.

Some farmers still insist on mixing sorghum and corn for silage? This is not a recommended practice for highest quality silage. The reason, it is very seldom that both crops mature at the same time.

Neither crop can be managed for top quality and yield is seldom increased.

Dr. Genter, VIP researcher, at various stations in Virginia during 1956-1958 found no consistant yield advantage by using the mixture when compared to corn alone.

When April comes we often see termites swarming. They go looking for a new place to begin a colony.

There are two new publications about termites.

It's not too late to get strawberries planted. There's no finer fruit for the home garden and they are to be had with little effort.

Raspberries also will furnish a delicious fruit. Some varieties provide one crop a year while others give two crops.

Sunrise is a fine early single crop variety. If you prefer a later ripening variety, plant Ott's Pennridge. It produces a large harvest of large berries having very good flavor.

The best double crop variety is September. This is the variety that I grow - you get two harvests for the price of one.

Raspberries are easy to grow. Fifteen or twenty plants, spaced three feet apart, in rows 6 feet apart, will supply a good supply of fruit for home use.

One of the most important pieces of legislature passed in recent years will have a real impact on all farmers and businesses. This is the Occupation Safety and Health Act of 1970.

It says, "each employer (a) shall furnish each employee a place of employment which is free from recognized hazards . . . (b) shall comply . . . with all rules pursuant to the act.

Penalties are enforcable up to $10,000 and criminal penalties are set for wilful violations resulting in death.

Each employer will be required to maintain and make available such records as the Secretary of Labor may require.

How to get the bugs out of *No-Tillage Corn–*

Diazinon® 14G

The heavier ground cover that goes with no-tillage gives soil insects a good hiding place. And their damage to corn can be severe.

But not if you use Diazinon when you plant. Diazinon 14G at 10 pounds per acre in the furrow controls wireworms, seed corn maggots, and rootworms. And it's safe to the seed.

So why chance losing what you can gain with no-tillage — saved time, lower production costs, more moisture conserved in the soil, and higher yields? Get the bugs out with Diazinon. Order some today.

"OH YEAH?"

"Oh, it never snows this late in March," said an Appomattox county gardener to his neighbor early last week. He laid out a nice garden – potatoes, greens, etc. etc. Then came Friday's 9-inch snowfall.

His neighbor says he's keeping his coffee pot hot, waiting for the early-gardeners to come over and share a good laugh.

School children all over the county had a day's vacation Friday.
